

User Guide

Introduction

This prototype is a small banking application made in Windows Forms. It allows the user to manage customer records and also manage different account types for each customer. The main functions include adding customers, creating accounts, deposit, withdraw, transfer between accounts, adding interest, and saving data when the program closes.

This guide explains the basic steps for using the prototype.

Main Features

The main features of the banking prototype are:

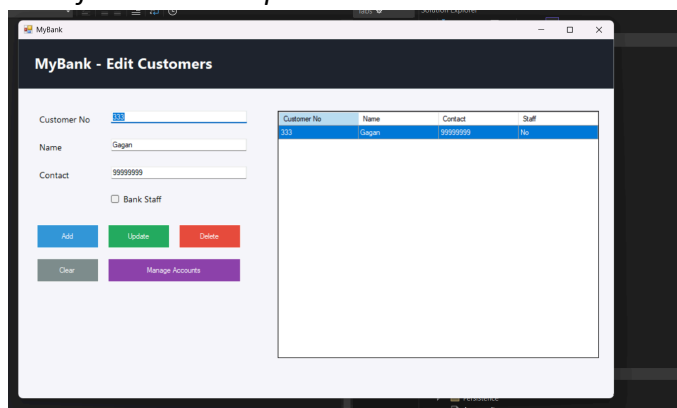

- add a new customer
- update customer details
- delete a customer
- open the account management form
- create Everyday, Investment, and Omni accounts
- deposit money
- withdraw money
- transfer money between the customer's own accounts
- add interest where applicable
- save and load data using XML

How to Use the Prototype

1. Open the application

Start the program from Visual Studio or from the built application file. The main form will open first.

Main form on startup

2. Add a customer

In the main form, enter the customer number, customer name, and contact details. Tick the bank staff checkbox if the customer is a staff member. Then click the Add button.

This will add the customer into the grid on the right side.

3. Update or delete a customer

Select a customer from the grid. The details will load into the input boxes. Change the details and click Update to save the changes. Click Delete if you want to remove the selected customer.

4. Open account management

Select a customer and click Manage Accounts. This opens the second form for account actions.

MyBank - Manage Accounts

333 - Gagan (Customer)

Account ID	Type	Balance	Interest %	Overdraft
------------	------	---------	------------	-----------

Add New Account

Type: Everyday

Opening:

Add Account

Transactions

Amount:

Deposit Withdraw

Target:

Transfer Add Interest

Refresh

5. Add an account

In the Manage Accounts form, choose the account type from the dropdown list. Enter the opening balance and click Add Account.

The new account will appear in the accounts grid.

MyBank - Manage Accounts

333 - Gagan (Customer)

Account ID	Type	Balance	Interest %	Overdraft
1001	Everyday	50000.00	0.00	0.20

Add New Account

Type: Everyday

Opening:

Add Account

Transactions

Amount:

Deposit Withdraw

Target:

Transfer Add Interest

Refresh

Selected Account: Everyday | ID: 1001 | Balance: 50000.00

Message:

6. Deposit money

Select an account from the grid. Enter the amount in the amount box and click Deposit. The account balance will update and a result message will show at the bottom.

7. Withdraw money

Select an account from the grid. Enter the amount and click Withdraw. If the withdrawal is valid, the balance will reduce. If it fails, the message will show the reason and fee if applicable.

8. Transfer money

Select the source account in the grid. Then choose the target account from the target dropdown. Enter the transfer amount and click Transfer.

If the transfer is valid, the money will move from the source account to the target account. If it fails, the transfer will not complete and the fee rule may apply depending on the account type and staff status.

9. Add interest

Select an account and click Add Interest. Interest is only added when the account meets its rule. Everyday account does not add interest.

10. Close and reopen the app

When the application closes, customer and account data are saved automatically. When the app is opened again, the saved data is loaded back.
